Scenarios shown: 32, 33, 34, 35, 36, 37. True MTD labels come from the dose-summary CSV.

Oracle CRM uses CRM r_{fixed} with $r = 0$ and $\alpha = 0$. BOIN uses approx1/approx2 with r_{adaptive} from the adaptive summary.

Patient-overdose percentages use dose-level treated counts above target divided by total treated counts. Oracle duration is not plotted.
